

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

DOUGLAS COUNTY ADDITIONS TO THE LIST OF KANSAS COLEOPTERA IN 1879 AND 1880.

By Prof. F. H. Snow, of the University of Kansas.

Of the 144 species included in the following list, 132 were collected in the immediate vicinity of Lawrence, in Douglas county; 10 were taken by Mr. T. B. Ashton, at Tonganoxie, in Leavenworth county, only 13 miles from Lawrence; and 2 were taken in western Kansas. The locality is stated in case of each species not found in Douglas county. These additions increase the list of Kansas Coleoptera to a total of 1855 species, which is the largest list yet published from any State in the Union. In presenting these additions, I desire to recognize the invaluable services of the students in my Zoölogy classes, who have searched the country in all directions for material with which to enrich their own entomological collections, and have invariably allowed me to retain for the University cabinets all species new to the Kansas list. The following students have been especially successful in obtaining new species: Louis L. Dyche, Richard Foster, John E. McCurdy, Frank Prentiss, and Ed. G. Smith.

To Drs. Le Conte and Horn I am indebted for the determination of many of the species.
